Art Unit: 3677

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-18, 22 and 23, drawn to a leg rope connection device, classified in class 24, subclass 132R.
- II. Claim 19, drawn to a method of repairing a broken leg-rope, classified in class 441, subclass 75.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the process for using the product as claimed can be practiced with another materially different product such as a connection device including a stainless steel housing that is resistant to salt water, sun and is stronger than polymers and receiving two clamping slides that are closable by hand so as to pinch the leg ropes between the clamping slides and the stainless steel housing.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
